

GST Health Check app · Google Sheet setup

GSC Intime · Vyapar Utsav 2026 · Stall G09 · about 10 minutes, once, on a laptop

A · Create the sheet and the connection (laptop)

1. Open Google Sheets with the office Google account and create a blank sheet. Name it **Vyapar Utsav 2026 – Health Check leads**.
2. In the sheet: **Extensions** → **Apps Script**. Delete the code already there.
3. Open `GSC_HealthCheck_GoogleSheet_Code.gs` in Notepad, copy everything, paste it into Apps Script, and click **Save**.
4. Near the top, change `SHARED_KEY = 'gsc-g09-2026'` to a word of your own (optional but recommended). Save again.
5. Click **Deploy** → **New deployment**. Click the gear icon, choose **Web app**. Set **Execute as: Me** and **Who has access: Anyone**. Click **Deploy**.
6. Google asks for permission: **Authorize access** → choose the account → **Advanced** → **Go to project (unsafe)** → **Allow**. This warning appears because the script is your own and not published by Google.
7. Copy the **Web app URL** (it ends in `/exec`). Send it to the tablet by WhatsApp or email.

B · Set up each tablet

1. Copy `GST_HealthCheck_App.html` to the tablet and open it in **Chrome**. Use the same browser all three days.
2. Tap the **GSC logo 5 times** to open Staff settings.
3. Paste the Web app URL, type the key, and give the tablet a name (e.g. *Counter tablet 1*). Tap **Save & test**. You should see **"Connected"**.
4. Do one test entry with your own number, then check the sheet: a **Leads** tab appears with the new row. Delete the test row.
5. Turn on screen auto-rotate lock (landscape) and keep the tablet on charge.

If the internet drops: the app keeps working. Every entry is saved on the tablet first; the top-right corner shows *"n waiting to upload"* and they upload by themselves when the connection returns (it retries every 30 seconds). **Do not clear Chrome's browsing data** on the tablet until all entries show as uploaded. At the end of each day, Staff settings → **Download all as CSV** keeps a backup copy.

C · What the sheet records

Columns	Contents
Received at · Record ID · Played at	Time the row reached the sheet, a unique ID (stops duplicates), time of play
Name · Mobile · Email · Business name · City	As entered; mobile is checked as a 10-digit Indian number and saved as +91 ...
Business type · Annual turnover	Trader / Manufacturer / Services / Other · Up to ₹5 cr / ₹5–50 cr / ₹50–500 cr / Above ₹500 cr
Score · Result · Areas to check	Score out of 10 · GST-fit (9–10) / Needs a check-up (6–8) / Needs attention (0–5) · the questions answered "No"
Q1 – Q10	Yes / No / Not answered for each question

Time taken · Timed out · Consent · Device	Seconds used, whether the 60 seconds ran out, consent tick, tablet name
Follow-up status · Notes	Blank, for your team to fill in while calling

D • Good to know

1. Sort or filter by **Result = Needs attention** to call the warmest leads first.
2. Anyone with the Web app URL *and* the key could add rows, so keep both within the team.
3. Visitor details are personal data under the Digital Personal Data Protection Act, 2023. Share the sheet only with the people who will follow up, and use the data only for the purpose stated on the consent line.
4. If you change the script later: **Deploy** → **Manage deployments** → **pencil** → **Version: New version** → **Deploy**.
The URL stays the same.
